Combinatorial Optimization: Exact and Approximate Algorithms

is an algorithm that finds a vertex cover of size at most twice the optimal size. It is known, however, that no constant-factor, polynomial-time, approximation algorithms can exist for the independent set problem. To see why there is no contradiction (and how the notion of Linear Programming Tools and Approximation Algorithms for ...

several approximation algorithms from the literature on Steiner trees can be re-interpreted through linear programs, in particular our hypergraphic relaxation yields a new view of the Robins-Zelikovsky [178] 1.55-approximation algorithm for the Steiner tree problem.

Approximation Algorithms for Optimization of Combinatorial Dynamical Systems Insoon Yang, Samuel A. Burden, Ram Rajagopal, S. Shankar Sastry, and Claire J. Tomlin Abstract This paper considers an optimization problem for a dynamical system whose evolution depends on a collection of binary decision variables. We develop scalable approximation algorithms with provable suboptimality bounds to

Approximation algorithm - Wikipedia

A notable example of an approximation algorithm that provides both is the classic approximation algorithm of Lenstra, Shmoys and Tardos for Scheduling on Unrelated Parallel Machines. The design and analysis of approximation algorithms crucially involves a mathematical proof certifying the quality of the returned solutions in the worst case. [1]

Iterative Methods in Combinatorial Optimization ...

Linear programming has been a successful tool in combinatorial optimization to achieve good approximation algorithms for problems which are NP-hard. In this thesis, we demonstrate that iterative methods give a general

framework to analyze linear programming formulations of combinatorial optimization problems. We show that iterative methods are
