Computational geometry is a branch of computer science devoted to the study of algorithms which can be stated in terms of geometry. Some purely geometrical problems arise out of the study of computational geometric algorithms, and such problems are also considered to be part of computational geometry. While modern computational geometry is a recent development, it is one of the oldest fields

Computational geometry is closely related to computer aided geometric design. The objects studied in computational geometry are curves and surfaces. In geometric design, a surface is generally divided into several patches such that each boundary shared by two adjacent patches is a plane curve and such that the projection of four boundaries of each patch into the
