10 Cool Facts About The Ice Age - Listverse

According to researchers at Cambridge University, human CO2 emissions may be able to stop the next ice age. It

works like this: Although Earth's planetary cycle tries to jump-start ice ages every once in a while, the only way it can begin is if the carbon dioxide levels of the atmosphere are exceptionally low. By pumping out CO₂, humanity may have accidentally made ice ages.

Life and extinction of megafauna in the ice-age Arctic
Understanding species extinction is a major concern today, and past extinctions provide valuable lessons. Numerous mammal species became extinct in the Arctic at the end of the ice age, but it is unclear why. By comparing numbers of dated bones with climate records, we find that megafaunal species

How did humans survive the ice age? :

AskAnthropology

Also - the Ice Age is a lot more climate variable than total and complete winter 100% of the time. Yes it was colder than at present, yes there were lots of glaciers, but people weren't living right up against the glaciers. People were living in the warmer, less-glaciated bits with more resources.
