[Inflation \(cosmology\) - Wikipedia](#)

In physical cosmology, cosmic inflation, cosmological inflation, or just inflation, is a theory of exponential expansion of space in the early universe. The inflationary epoch lasted from 10^{-36} seconds after the conjectured Big Bang singularity to sometime between 10^{-33} and 10^{-32} seconds after the singularity.

[Is Inflationary Cosmology Science? | Sean Carroll](#)

Is Inflationary Cosmology Science? Inflationary cosmology is the clever idea that the early universe underwent a brief period of accelerated expansion at an enormously high energy density, before that energy converted in a flash into ordinary hot matter and radiation. Inflation helps explain the observed large-scale smoothness of the universe, as well as the absence of unwanted relics such

According to inflationary cosmology [1, 2, 3], the universe expanded exponentially quickly for a fraction of a second very early in its history - growing from a patch as small as 10^{-26} m, one hundred billion times smaller than a proton, to macroscopic scales on the order of a meter, all within about 10^{-35} s - before slowing down to the more
