Jets in Extragalactic Radio Sources | Science Abstract. Observations now require that there be a continuous supply of energy to the giant extragalactic radio sources. These observations also suggest that this energy input may be in the form of streams or jets of gas emanating from the centers of galaxies and quasi-stellar objects.

The existence of jets emanating from the central sources of radio galaxies and quasars was perhaps the most important discovery for our understanding of the nature of active galactic nuclei. These proceedings present reviews and research papers on extragalactic radio sources. The book begins with a discussion of the phenomenology and models of radio sources. The main parts devoted to detailed studies of jets by VLBI, to the information obtained about the structure of the central source as
