The present work aims at investigating whether large-scale streaks can be optimally-growing in a nonlinear framework for a turbulent channel flow. Changing the friction Reynolds number from 180 to

Structure formation - Wikipedia

The modern Lambda-CDM model is successful at predicting the observed large-scale distribution of galaxies, clusters and voids; but on the scale of individual galaxies there are many complications due to highly nonlinear processes involving baryonic physics, gas heating and cooling, star formation and feedback.

The corresponding computational procedures for studying these large-scale structures are computationally large and entail an extremely large number of degrees of freedom.

We have developed hybrid simulators that incorporate the linear and nonlinear dynamics of the substructures and the overall response of the integrated system. We discuss one such simulator that couples Maxwell's equations and
