Logic and Games on Automatic Structures | SpringerLink

In this book, the author extends this connection between logic and games to the class of automatic structures, where relations are recognized by synchronous finite automata. In model-checking games for automatic structures, two coalitions play against each other with a particular kind of hierarchical imperfect information.

Seminar Logic, Complexity, Games: Automatic Structures

Automatic structures thus provide a domain of structures that is relevant for the programme of computational model theory, i.e. the study of logical definability and

computational complexity of finitely presentable structures. Computational model theory builds on, and extends finite model theory; it translates computational problems to logical ones and tackles them using tools of logic. This
