Abstract: We give a pedagogical introduction to the dynamics of N=2 supersymmetric systems in four dimensions. The topic ranges from the Lagrangian and the Seiberg-Witten solutions of SU(2) gauge theories to Argyres-Douglas CFTs and Gaiotto dualities.

Tachikawa, Yuji . Understanding the dynamics of gauge theories is important because all known interactions are based on the principle of local gauge symmetry. Beyond the perturbative regime however, this is a notoriously difficult problem. Demanding invariance under supersymmetry turns out to provide a better handle, and allows one to analyze

Supersymmetric quantum field theories in four dimensions with extended N=2 supersymmetry are further constrained and have therefore been a fertile field of research in theoretical physics for quite some time. Moreover, there are far-reaching mathematical ramifications that have led to a successful dialogue with differential and algebraic geometry.
