THE BAUM-CONNES CONJECTURE AND PROPER GROUP ACTIONS ON ...

the baum-connes conjecture and proper group actions on affine buildings3 Note that since $GL(n, K)$ embeds into $SL(n + 1, K)$, any nitely generated subgroup of $GL(n, K)$ can be realized as a nitely generated subgroup of $SL(n + 1, K)$. Proper Group Actions and the Baum-Connes Conjecture

The Baum-Connes conjecture predicts that the K -homology of the reduced C^* -algebra of a group can be computed as the equivariant K -homology of the classifying space for proper actions. The approach is expository, but it contains proofs of many basic results on topological K -homology and the K -theory of C^* -algebras.

The Baum-Connes conjecture predicts that the K -homology of the reduced C^* -algebra of a group can be computed as the equivariant K -homology of the

classifying space for proper actions. The approach is expository, but it contains proofs of many basic results on topological K-homology and the K-theory of C^* -algebras. It features a detailed introduction to Bredon homology for infinite groups.

Baum Connes conjecture - Wikipedia

In mathematics, specifically in operator K-theory, the Baum-Connes conjecture suggests a link between the K-theory of the reduced C^* -algebra of a group and the K-homology of the classifying space of proper actions of that group.
